Comcast Service Provider

It is the responsibility of the end user or tenant to install the coax from the user or tenant space to the closest COMCAST Network Access Point (CNAP).

For NEW installations shared use of tenant installed Emergency Evacuation system conduit is allowed. Refer related standard S4 Emergency Tenant Paging.

This installation shall follow MAA design standards and shall also follow MAA Permit procedures if applicable.

Terminations of the COAX shall not be twist on or screw on connectors. All connectors shall be compression crimp fittings.

COMCAST can terminate coax for an additional fee.

COMCAST has established COMCAST Network Access Point (CNAP) at BWI. They are located within specific areas in and around BWI. Prior to installation it will be up to the contractor to contact MAA/OT to determine where the closest Tap is for connection.

All Coax installed shall be RG 11, plenum rated cabling. Customers must run their own RG11 coax cable from the nearest communications closet to the room/kiosk. Once that is complete, Comcast will coordinate product installation.

COMCAST has recommended we use Commscope plenum rated RG-11 drop cable. Link below.

NOTE: RG 6 cable can be used but not recommended due to distance limitations and potential signal loss for high speed applications.
