## MARYLAND AVIATION ADMINISTRATION ENVIRONMENTAL BUILDING INSPECTION

---

The Maryland Aviation Administration (MAA) will be performing a required visual inspection for previously identified asbestos-containing materials at the BWI Marshall Airport Terminal Building and outbuildings beginning November 30, 2020 through January 29, 2021. The Maryland Department of the Environment requires that State agencies perform visual inspections on an annual basis and a complete re-inspection every three years.

The inspection process will consist of a visual inspection of materials that are known or assumed to contain asbestos. Examples of materials that will be visually inspected are: fire doors, sealants, floor tiles, and mastics. The inspection process in each area is brief; however, it may be necessary to access areas above ceilings, inside wall chases, etc.

The survey will be performed by a consultant to the MAA, EA Engineering, Science and Technology (EA) and ARIA Environmental Consultants (ARIA). Each EA and Aria inspector is accredited to perform asbestos inspections by the U.S. Environmental Protection Agency and by the Maryland Department of the Environment. Each inspector has obtained a BWI Marshall Airport identification badge and will need to enter all public and leased spaces to conduct these inspections. The inspections will be conducted during normal business hours.

Your cooperation with this effort is greatly appreciated.

The points of contact are Mark Williams at 410-859-7448 or Evans Browne at 410-859-7806.
