

Maryland Aviation Administration

Sustainability and Environmental Mission Statement

The Maryland Aviation Administration (MAA), which operates the Baltimore/Washington International Thurgood Marshall and Martin State Airports, is committed to the betterment of our planet, our people, our community and our economic growth. This commitment is to sustainable growth while practicing proactive environmental risk management, pollution control, continuous improvement in environmental performance, and effective communication with employees and stakeholders.

Management Commitment

The MAA management is committed to providing the leadership and resources necessary to ensure that the commitments outlined within this policy are achieved and integrated into regular business practices.

Employee Commitment

Continuous improvement in environmental and sustainable performance is the responsibility of all employees at the MAA. Employees are required to be aware of the environmental responsibilities and objectives associated with their jobs.

Compliance

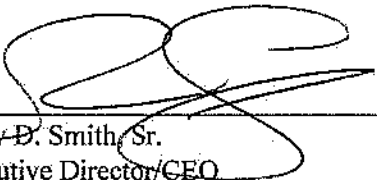

The MAA will continue to comply with all applicable environmental laws and regulations within its control.

Sustainable Practices

The MAA will implement a Sustainability Program based on four pillars (Environment, Economic, Social and Human). These four pillars will ensure a strong program that will position MAA to be a leader in aviation sustainability. MAA will ensure that planning processes proactively identify areas for resource efficiency and sustainable business practices during project planning, design, construction, and on-going operation and maintenance of its facilities.

Continuous Improvement

The MAA will strive to "be better" in the continuous improvement of its sustainability program and environmental performance through regular evaluation of its business practices.
